

Y	Q	Projectiles
2022	3	<p>A ball is kicked from horizontal ground with a speed of <math>25 \text{ m s}^{-1}</math> at an angle of <math>30^\circ</math> to the horizontal.</p> <p>(a) Calculate the maximum height of the ball. <span style="float: right;">2</span></p> <p>As the ball falls it is caught at a height of 1 metre from the ground.</p> <p>(b) Calculate the total horizontal displacement of the ball during its motion. <span style="float: right;">3</span></p>
2019	15	<p>A ball is kicked from floor level at an angle of <math>\theta</math> with initial speed <math>u \text{ m s}^{-1}</math> in a room of height 3 metres.</p> <p>(a) Show that, if the ball does not hit the ceiling, <math>\sin \theta &lt; \frac{\sqrt{6g}}{u}</math>. <span style="float: right;">3</span></p> <p>(b) The ball just touches the smooth ceiling at the highest point of its trajectory.</p> <p>(i) Show that the range of the ball is <math>12\sqrt{\frac{u^2 - 6g}{6g}}</math> metres. <span style="float: right;">5</span></p> <p>(ii) State the constraint that must be placed on the initial speed of the ball in this case. <span style="float: right;">1</span></p>
2018	9	<p>A projectile is launched with speed <math>v \text{ m s}^{-1}</math>, at an angle <math>\theta</math> to the horizontal.</p> <p>(a) Show that the horizontal range <math>R</math> of the projectile is given in metres by <math display="block">R = \frac{v^2 \sin 2\theta}{g}</math>. <span style="float: right;">4</span></p> <p>(b) A tennis training device fires balls at the same speed each time, but the angle of projection can vary.</p> <p>A ball is fired at <math>30^\circ</math> to the horizontal and has a range of <math>R</math> metres.</p> <p>Another ball is fired at <math>35^\circ</math> to the horizontal and has a range of <math>(R + 5)</math> metres.</p> <p>(i) Calculate the initial speed of the balls. <span style="float: right;">3</span></p> <p>(ii) On a particular day, the tennis balls are assisted by a horizontal tailwind of <math>7 \text{ m s}^{-1}</math>. Find the new range of a ball fired at <math>35^\circ</math> to the horizontal. <span style="float: right;">3</span></p>
2017	7	<p>A cricket batsman hits a ball from ground level. The ball lands on the boundary which is 60 metres away.</p>  <p>If the angle of flight to the horizontal ground is <math>28^\circ</math> at the instant the ball leaves the bat, calculate the initial speed of the ball. <span style="float: right;">5</span></p>

2016	16	<p>A ball is projected from an origin on horizontal ground with speed <math>V \text{ m s}^{-1}</math> at an angle of elevation of <math>\theta</math> and moves freely under gravity. It passes through a point which is <math>x</math> metres horizontally from the origin at a height <math>y</math> metres above the ground.</p> <p>(a) Show that the trajectory of the particle has equation</p> $y = x \tan \theta - \frac{gx^2}{2V^2} (1 + \tan^2 \theta).$ <p>(Note that <math>\sec^2 \theta = 1 + \tan^2 \theta</math>) <span style="float: right;">3</span></p> <p>(b) The ball is at a vertical height of <math>h</math> metres when it has travelled <math>4h</math> metres horizontally. It is again at a height of <math>h</math> metres when it has travelled a further <math>h</math> metres horizontally. Determine the angle of projection <math>\theta</math>. <span style="float: right;">5</span></p>
2016 Spec	15	<p>A golfer hits a ball from the point <math>O</math> with velocity <math>(P\mathbf{i} + Q\mathbf{j}) \text{ m s}^{-1}</math>. The ball first hits the ground a distance of 50 metres from <math>O</math> in the horizontal plane.</p> <p>(a) Show that <math>PQ = 25g</math>. <span style="float: right;">4</span></p> <p>(b) Given that the ball passes through <math>45\mathbf{i} + 1.6\mathbf{j}</math></p> <p>(i) Calculate <math>P</math>. <span style="float: right;">4</span></p> <p>(ii) Calculate the initial angle of projection to the horizontal. <span style="float: right;">2</span></p>
