

| Y    | Q  | Simple Harmonic Motion  |
|------|----|---|
| 2024 | 5  | <p>A particle is moving with simple harmonic motion.</p> <p>The maximum acceleration of the particle is <math>20 \text{ m s}^{-2}</math> and its maximum speed is <math>10 \text{ m s}^{-1}</math>.</p> <p>Calculate the speed of the particle when it is 1 metre from the centre of the oscillation.</p> <p style="text-align: right;">4</p>   |
| 2023 | 6  | <p>A vertical spring has one end fixed and the other end attached to a particle.</p> <p>The particle is pulled vertically downwards a small distance and released.</p> <p>The ensuing motion is simple harmonic with period <math>\frac{\pi}{8}</math> seconds.</p> <p>As the particle passes through the equilibrium position it has a speed of <math>2 \text{ m s}^{-1}</math>.</p> <p>(a) Calculate the amplitude of the motion. <span style="float: right;">2</span></p> <p>(b) Calculate the maximum acceleration of the particle. <span style="float: right;">1</span></p>  |
| 2023 | 19 | <p>A particle of mass, <math>m</math> kg, is suspended in equilibrium from a point A on the ceiling of a room by a light spring of natural length <math>l</math> metres and modulus of elasticity <math>2mg</math> newtons.</p> <p>(a) Show that the extension of the spring is <math>\frac{l}{2}</math> metres. <span style="float: right;">2</span></p> <p>A second identical spring is attached to the particle and secured to a point B on the floor of the room. B is vertically below A and the distance AB is <math>3l</math> metres.</p> <p>(b) Given that both springs remain in tension when the particle is again in equilibrium, find an expression in terms of <math>l</math> for the extension of the original spring. <span style="float: right;">4</span></p> |
| 2022 | 4  | <p>A particle moves with simple harmonic motion about a point O.</p> <p>The particle starts from its extreme position and first reaches a maximum speed of <math>6 \text{ m s}^{-1}</math> after 4 seconds.</p> <p>(a) State the period of the motion. <span style="float: right;">1</span></p> <p>(b) Hence, or otherwise, calculate the amplitude of the motion. <span style="float: right;">2</span></p>   |
| 2019 | 4  | <p>A particle is moving with simple harmonic motion. It achieves a maximum speed of <math>15 \text{ m s}^{-1}</math> and a maximum acceleration of magnitude <math>60 \text{ m s}^{-2}</math>.</p> <p>Find its velocity 2 seconds after passing through the centre of the oscillation and interpret your answer. <span style="float: right;">5</span></p>   |
| 2018 | 7  | <p>A particle is projected from a point <math>A</math> at time <math>t = 0</math> and performs simple harmonic motion with <math>A</math> as the centre of oscillation.</p> <p>The amplitude of the motion is 6 metres and period is 10 seconds.</p> <p>(a) Calculate the first two times when the particle will be 4 metres from <math>A</math>. <span style="float: right;">4</span></p> <p>(b) Calculate the speed of the particle at the second of these times and comment on its direction. <span style="float: right;">2</span></p>   |

|              |    |  |
|--------------|----|--|
| 2018         | 14 | <p>A bungee jumper of mass 70 kg stands on a bridge 40 metres above a river. The natural length of the bungee cord is 10 metres and it has a modulus of elasticity of 1000 newtons.</p> <p>If the bungee jumper falls vertically from rest, calculate their height above the water when the cord is fully extended.</p> <p style="text-align: right;">5</p> <p>*other methods are available!</p>   |
| 2017         | 12 | <p>A body of mass 750 grams is attached to a light elastic string of natural length 50 cm and modulus of elasticity 150 N. The mass hangs vertically with one end of the string attached to the ceiling.</p> <p>(a) Find the extension in the string when the body hangs in equilibrium. <span style="float: right;">2</span></p> <p>The body is released from a position 2 cm below the equilibrium position.</p> <p>(b) (i) Show that the body moves with simple harmonic motion modelled by <math>\ddot{x} = -400x</math> where <math>x</math> metres is the displacement from the equilibrium position. <span style="float: right;">3</span></p> <p>(ii) Find the speed of the body when it is 0.5 cm above the point of release. <span style="float: right;">2</span></p> <p>(c) On another occasion the body is pulled down 3 cm below the equilibrium position. Explain why, in this case, the subsequent motion is not simple harmonic. <span style="float: right;">1</span></p> |
| 2016         | 5  | <p>The tip of a saw oscillates with simple harmonic motion.</p> <ul style="list-style-type: none"> <li>• When the tip is 5 mm from its centre of motion it has a velocity of <math>2 \text{ m s}^{-1}</math>.</li> <li>• When it is 7 mm from the centre it has a velocity of <math>1 \text{ m s}^{-1}</math>.</li> </ul> <p>Calculate the amplitude of the motion and find the number of oscillations in one second. <span style="float: right;">5</span></p>   |
| 2016<br>Spec | 6  | <p>An object moves horizontally along the <math>x</math>-axis with simple harmonic motion about a point O. The period of the oscillation is 12 seconds. It is released from its extreme position A, a distance of 3 metres from O.</p> <p>Find the first time the particle will be a distance of 4 metres from A. <span style="float: right;">4</span></p>   |
