1	<p>Two fridge magnets are mathematically similar.</p>  <p>One magnet is 4 centimetres long and the other is 10 centimetres long. The area of the smaller magnet is 18 square centimetres. Calculate the area of the larger magnet.</p>	3
2	<p>A café sells cups of coffee in two sizes. The cups are mathematically similar. The smaller cup has a height of 6 cm and a volume of 400 ml. The larger cup has a height of 8 cm. Calculate the volume of the larger cup.</p> 	3
3	<p>A necklace is made of beads which are mathematically similar.</p>  <p>The height of the smaller bead is 0.8 centimetres, and its area is 0.6 square centimetres. The height of the larger bead is 4 centimetres. Calculate the area of the larger bead.</p>	3

4	<p>A supermarket sells cylindrical cookie jars which are mathematically similar.</p> <div style="text-align: center;">  </div> <p>The smaller jar has a height of 15 centimetres and a volume of 750 cubic centimetres. The larger jar has a height of 24 centimetres. Calculate the volume of the larger jar.</p>	3
5	<p>Two triangles are mathematically similar</p> <div style="text-align: center;">  </div> <p>Larger triangle has a height of 30 centimetres. The smaller triangle has a height of 24 centimetres. The area of the larger triangle is 625 square centimetres. Calculate the area of the smaller triangle.</p>	3

Paper A1 – Answers		15
1	<p>Mark 1 Find the scale factor for length (LSF) $LSF = \frac{10}{4}$ or $\frac{5}{2}$ or 2.5</p> <p>Mark 2 Find the area scale factor (ASF) $ASF = \left(\frac{10}{4}\right)^2$</p> <p>Mark 3 Calculate the area of the larger magnet and state correct units $Area = 18 \times \left(\frac{10}{4}\right)^2 = 112.5 \text{ cm}^2$</p> <p>2 marks will be given for using volume scale factor $18 \times \left(\frac{10}{4}\right)^3 = 281.25$</p>	3
2	<p>Mark 1 Find the scale factor for length (LSF) $LSF = \frac{8}{6}$ or $\frac{4}{3}$</p> <p>Mark 2 Find the volume scale factor (VSF) $VSF = \left(\frac{8}{6}\right)^3$</p> <p>Mark 3 Calculate the volume of the larger cup and state correct units $Volume = 400 \times \left(\frac{8}{6}\right)^3 = 948 \text{ ml}$</p> <p>2 marks will be given for using area scale factor $400 \times \left(\frac{8}{6}\right)^2 = 711.1$</p>	3
3	<p>Mark 1 Find the scale factor for length (LSF) $LSF = \frac{4}{0.8}$ or 5</p> <p>Mark 2 Find the area scale factor (ASF) $ASF = (5)^2$</p> <p>Mark 3 Calculate the area of the larger magnet and state correct units $Area = 0.6 \times (5)^2 = 15 \text{ cm}^2$</p> <p>2 marks will be given for using volume scale factor $0.6 \times (5)^3 = 75$</p>	3
4	<p>Mark 1 Find the scale factor for length (LSF) $LSF = \frac{24}{15}$ or $\frac{8}{5}$ or 1.6</p> <p>Mark 2 Find the volume scale factor (VSF) $VSF = (1.6)^3$</p> <p>Mark 3 Calculate the volume of the larger jar and state correct units $Volume = 750 \times (1.6)^3 = 3072 \text{ cm}^3$</p> <p>2 marks will be given for using area scale factor $750 \times (1.6)^2 = 1920$</p>	3
5	<p>Mark 1 Find the scale factor for length (LSF) $LSF = \frac{24}{30}$ or $\frac{4}{5}$ or 0.8</p> <p>Mark 2 Find the area scale factor (ASF) $ASF = (0.8)^2$</p> <p>Mark 3 Calculate the area of the smaller triangle and state correct units $Area = 625 \times 0.8^2 = 400 \text{ cm}^2$</p> <p>2 marks will be given for using volume scale factor $625 \times (0.8)^3 = 320$</p>	3
