

Using Trig Formulae		
1	 <p>For triangle ABC:</p> <ul style="list-style-type: none"> • AB is 20 cm, • BC is 16 cm • Angle ABC is 80° <p>Calculate area of this triangle.</p>	2
2	 <p>Find the length of side DF</p>	3
3	 <p>For this triangle:</p> <p>Side AB is 12 cm Angle B is 20° Angle C is 30°</p> <p>Find the length of side AC</p>	3
4	 <p>Calculate the size of angle BPM</p>	3

5	<p>Side AB is 30 metres Side CB is 18 m Angle B is 96°</p> <p>Calculate the size of angle A</p>  <p>The diagram shows a triangle with vertices A, B, and C. Side AB is the top horizontal side, labeled 30 m. Side CB is the right side, labeled 18 m. The angle at vertex B is labeled 96°. Vertex A is on the left, B is on the right, and C is at the bottom.</p>	3

	Using Trig Formulae - Answers	
1	Mark 1 Substitute into the area formula Mark 2 Calculate area	$Area = \frac{1}{2} \times 20 \times 16 \times \sin 80$ $Area = 157.6 \text{ cm}^2$
2	Use the cosine rule for this triangle Mark 1 Substitute into the cosine rule Mark 2 Calculate the exact value Mark 3 Calculate DF	$DF^2 = 15^2 + 13^2 - 2 \times 15 \times 13 \times \cos 110$ $DF^2 = 527.3878559 \dots$ $DF = \sqrt{527.3878559} = 22.96 \text{ or } 23 \text{ cm}$
3	Use the sine rule for this triangle Mark 1 Substitute into the formula Mark 2 rearrange sine rule Mark 3 Calculate side AC 2 marks are given for $\frac{AC}{\sin 30} = \frac{12}{\sin 20}$ which leads to an answer of AC = 17.5 cm	$\frac{AC}{\sin 20} = \frac{12}{\sin 30}$ $AC = \frac{12 \times \sin 20}{\sin 30}$ $AC = 8.2 \text{ cm}$
4	Use the cosine rule for this triangle Mark 1 Substitute into the cosine rule Mark 2 Calculate the exact value Mark 3 Calculate angle BPM 2 marks are given for finding angle PMB = 57.8° or angle PBM = 53.5°	$Angle \text{ BPM} = \frac{(1000^2 + 950^2 - 1100^2)}{2 \times 1000 \times 950}$ $Angle \text{ BPM} = \frac{277}{790} = 0.36447368 \dots$ $EDF = \cos^{-1}\left(\frac{277}{790}\right) = 68.6^\circ$
5	Use the sine rule for this triangle Mark 1 Substitute into the sine rule Mark 2 Rearrange Mark 3 Calculate angle A	$\frac{18}{\sin A} = \frac{30}{\sin 96} \text{ or } \frac{\sin A}{18} = \frac{\sin 96}{30}$ $\sin A = \frac{18 \times \sin 96}{30}$ $A = \sin^{-1}(0.596713\dots) = 36.6^\circ$
