### 2019 Mathematics

## Higher Paper 1 (Non-calculator)

### **Finalised Marking Instructions**

© Scottish Qualifications Authority 2019

These marking instructions have been prepared by examination teams for use by SQA appointed markers when marking external course assessments.

The information in this document may be reproduced in support of SQA qualifications only on a non-commercial basis. If it is reproduced, SQA must be clearly acknowledged as the source. If it is to be reproduced for any other purpose, written permission must be obtained from <a href="mailto:permissions@sqa.org.uk">permission@sqa.org.uk</a>.

#### Marking instructions for each question

Question		Generic scheme	Illustrative scheme	Max mark
1.		• <sup>1</sup> start to differentiate	• <sup>1</sup> $2x^3$ or $6x^2$	4
		• <sup>2</sup> complete derivative and equate to 0	• <sup>2</sup> $2x^3 - 6x^2 = 0$	
		• <sup>3</sup> factorise derivative	• <sup>3</sup> $2x^2(x-3)$	
		• <sup>4</sup> process cubic for $x$	• <sup>4</sup> 0 and 3	
Note	s:			

- 1.  $\bullet^2$  is only available if '=0' appears at either  $\bullet^2$  or  $\bullet^3$  stage, however see Candidate A.
- 2. Accept  $2x^3 = 6x^2$  for  $\bullet^2$ .
- 3. Accept  $x^2(2x-6)$  for  $\bullet^3$ .
- 4. For candidates who divide by x or  $x^2$  throughout see Candidate B.
- 5.  $\bullet^3$  is available to candidates who factorise **their** derivative from  $\bullet^2$  as long as it is of equivalent difficulty.
- 6. x = 0 and x = 3 must be supported by valid working for  $\bullet^4$  to be awarded.

### Commonly Observed Responses:

11.	(a)		• <sup>1</sup> express A in terms of x and h	• $(A =) 16x^2 + 16xh$	3
			• <sup>2</sup> express height in terms of $x$	• <sup>2</sup> $h = \frac{2000}{8x^2}$	
			• <sup>3</sup> substitute for <i>h</i> and complete proof	• $A = 16x^2 + 16x \times \frac{2000}{8x^2}$	
				leading to $A = 16x^2 + \frac{4000}{x}$	
Note	s:				1
3. F	or car	ndidat	tion for $h$ at $\bullet^3$ must be clearly shown es who omit some of the surfaces of the erved Responses:		
	(b)		• <sup>4</sup> express <i>A</i> in differentiable form	• $16x^2 + 4000x^{-1}$	6
			• <sup>5</sup> differentiate	• $32x - 4000x^{-2}$	
			<ul> <li>equate expression for derivative to 0</li> </ul>	• $32x - 4000x^{-2} = 0$	
			• <sup>7</sup> process for $x$	• <sup>7</sup> 5	
			• <sup>8</sup> verify nature	• <sup>8</sup> table of signs for a derivative (see below) : minimum or $A''(x) = 96 > 0 \implies$ minimum	
			• <sup>9</sup> evaluate A	• $A = 1200$ or min value = 1200	

- 4. For a numerical approach award 0/6.
- 5. •<sup>6</sup> can be awarded for  $32x = 4000x^{-2}$ .
- 6. For candidates who integrate any term at the •<sup>5</sup> stage, only •<sup>6</sup> is available on follow through for setting their 'derivative' to 0.
- 7. •<sup>7</sup>, •<sup>8</sup> and •<sup>9</sup> are only available for working with a derivative which contains an index  $\leq -2$ .
- 8.  $\sqrt[3]{\frac{4000}{32}}$  must be simplified at  $\bullet^7$  or  $\bullet^8$  for  $\bullet^7$  to be awarded.
- 9. •<sup>8</sup> is not available to candidates who consider a value of  $x \le 0$  in the neighbourhood of 5.
- 10.  $\bullet^9$  is still available in cases where a candidate's table of signs does not lead legitimately to a minimum at  $\bullet^8$ .
- 11. •<sup>8</sup> and •<sup>9</sup> are not available to candidates who state that the minimum exists at a negative value of x. See Candidates C and D.

For the table of signs for a derivative, accept:

- For this question do not penalise the omission of 'x' or the word 'shape'/'slope'.
- Stating values of A'(x) in the table is an acceptable alternative to writing '+' or '-' signs. Values must be checked for accuracy.

• The only acceptable variations of A'(x) are: A',  $\frac{dA}{dx}$  and  $32x - 4000x^{-2}$ .

$\theta = 7$	20 '5·5°		•4 🗸	0=73	•`• • •	

Q	Question		Generic scheme	Illustrative scheme	Max mark
15.	(a)		• <sup>1</sup> find gradient of radius	• $^{1} -\frac{1}{3}$	3
			• <sup>2</sup> state gradient of tangent	• <sup>2</sup> 3	
Noto			• <sup>3</sup> state equation of tangent	• <sup>3</sup> $y=3x-2$	

1. Do not accept 
$$y = \frac{3}{1}x - 2$$
 for  $\bullet^3$ .

- 2.  $\bullet^3$  is only available as a consequence of trying to find and use a perpendicular gradient.
- 3. At  $\bullet^3$  accept, y-3x+2=0 or any other rearrangement of the equation where the constant terms have been simplified.

#### Commonly Observed Responses:

	(b)	(i)	• <sup>4</sup> find coordinates of T	•4 (0,-2)	1
		(ii)	• <sup>5</sup> find midpoint CT	• <sup>5</sup> (4,5)	3
			• <sup>6</sup> find radius of circle with diameter CT	• <sup>6</sup> $\sqrt{65}$ stated or implied by • <sup>7</sup>	
			• <sup>7</sup> state equation of circle	• <sup>7</sup> $(x-4)^2 + (y-5)^2 = 65$	
Note					

#### Notes:

- 4. Answers in part (b)(i) must be consistent with answers from part (a).
- 5. Accept x = 0, y = -2 for  $\bullet^4$ .

6. 
$$(x-4)^2 + (y-5)^2 = (\sqrt{65})^2$$
 does not gain •<sup>7</sup>.

7.  $\bullet^7$  is not available to candidates who use a line other than CT as the diameter of the circle.
